## THINGS YOU MAY WANT TO KNOW

### TYPES OF TREES

Dwarf: Plume Cypress, Juniperus Sabina, Juniperus Pfitzeriana, Mugho Pine, Globe Arborvitae, Taxus Cuspidata.

Slow growing: Arborvitae of all kinds, and Hemlock.

Fast growing: Remainder of varieties listed. Growth per year, from 6 inches to 1 foot after the first year. The growth of any of the fast growing varieties may be retarded by pruning the roots, pruning the tops, or nipping off the terminal buds.

### ADAPTATION TO VARIOUS CLIMATES

Our trees have been successfully grown in all parts of the country. Except under unusual circumstances, soil conditions are almost as important as geographic locations.

### SOIL CONDITIONS

Pines prefer a light to medium soil; sunlight. Spruce: A heavier soil, moderate sunlight, except Norway Spruce which will grow in fairly light soil. Larch: medium to heavy soil and sunlight. Arborvitae: good soil, will stand moderate sun but not extreme exposure. Fir and Hemlock: heavy soil, best for shady locations.

### ABOUT COLORADO BLUE SPRUCE

Trees grown from the seed of Colorado Blue Spruce range from real blue to blue-green. About 20% are ordinarily a good blue color -- the balance of the trees we are offering run better than average color. The color may be improved by applying as fertilizer a small amount of nitrate of soda -- which our trees have not had as we must grow them to stand any adverse conditions (poor soil, etc.) they may meet with after leaving the nursery.

### ROOT PRUNING

Root pruning is not necessary when trees are in their permanent places. It is helpful, however, in making a tree dense. Since a tree's root system is about equal to its crown (foliage), to root prune, cut around the tree with a sharp spade at about the same distance from the base as the tips of the branches are from the trunk. Root pruning is advisable when trees are to be moved at some future date. The removal of lateral terminal buds in late fall or early spring also helps to make trees dense.

### SHIPPING DATE

Usually we start shipping from about April 10, depending on weather conditions. Shipments are made as early as possible, unless otherwise instructed. If this seems late in some sections, remember that sturdy, DORMANT trees will be all right even if it is warm where they are to be planted. If they are watered when planted (and if very warm at short intervals thereafter) they will more than show their appreciation. OUR TREES ARE GUARANTEED TO LIVE!

## FLOWERING SHRUBS

### STRONG - HEALTHY - GUARANTEED TO LIVE

#### IBOLIUM PRIVET—18 to 24 inches tall

Fast growing, white flowers—June and July.  
Very hardy, upright growth. Makes a beautiful  
hedge. 100 for \$15.00, 50 for \$7.50, 25 for \$4.00,  
10 for \$2.25

#### JAPANESE BARBERRY—12 to 18 inches tall

Dwarf habit, very graceful. Its foliage turns  
to a beautiful red in the fall. Red berries re-  
main all winter. One of the best hedge plants.  
100 for \$10.00, 50 for \$5.00, 25 for \$2.75, 10 for \$1.50

### PLANTING AND CARE

To plant these small trees, use a trowel or shovel and make a hole large enough to accommodate the roots when they are well spread out. Put a little water in the hole, pack the earth around the roots, keeping them well spread. When the hole is filled, pack the earth down firmly so that no air can get to the roots to dry them out. Be very careful between the time you receive the trees and the time you plant them not to let the roots dry out. Dry roots are always fatal to an evergreen. If you are planting the trees in your garden to let them grow a few years before putting them in their permanent locations, keep them about a foot apart. If you are not ready to put them in their permanent location at the end of two years, be sure to transplant them again, placing them two feet apart.

● They are guaranteed because they have been transplanted every two years. Because this transplanting produces an abundance of fibrous roots which you do not find on trees which have not been properly transplanted.

Because they have been started in our rigorous climate and have withstood temperatures of 50 degrees below zero to 100 degrees above zero.

We intend to stay in the Nursery Business. We want friends and satisfied customers. We offer you only the best trees—trees that will live.
